

AH-DA

Spacer made of plastic for use in in-situ concrete

Plastic spacers AH-DA are available in addition to the basic products for punching shear and shear force reinforcements. These accessories are used in conjunction with the JDA, especially in in-situ concrete. Installing them maintains the required spacing between the reinforcement layers. The spacers are made of plastic and are available in four different versions - for concrete covers of 15, 20, 25 and 30 mm.

Artikel	Typ	H	B	L	W
AH-DA25	JORDAHL Spacer AH-DA for JDA,	38 mm	37 mm	70 mm	0.005 kg
