

Distance Pipes

Accessories for making clamping points

Distance Pipes are used to make clamping points for wall formwork and for pipe lead-throughs in concrete parts. Their rough surface ensures that they bond perfectly with the concrete. The plastic tubes are also available with a smooth surface. We recommend combining them with Super cones for easier installation. Distance Pipes are 2000 mm long, have an inner diameter of 20 to 40 mm and an outer diameter of 26 to 46 mm. This accessory is also available with other dimensions on request.

Artikel	Typ	W
