

Fibre-Concrete Plugs

Fibre-Concrete Plugs are formwork accessories used to close the fibre concrete formwork spreaders. Fibre-reinforced concrete is stable, resilient, durable and much lighter than normal concrete. The accessories have been tested and verified as watertight in conjunction with the fibre-reinforced concrete adhesive in accordance with DIN1048. They have an inner diameter of 22 mm and are 20 to 50 mm long. Other dimensions are also possible on request.
