

GSQ Slide sleeve

The sliding sleeve GSQ is a necessary accessory for the shear dowel HED-S in the stainless steel version. Using the sleeve eliminates the need for drilling through the formwork or subsequent concrete drilling. The sliding sleeve GSQ is made of stainless steel (A4) and enables the dowel to move longitudinally and transversely in the sliding sleeve. The standard lengths are 180 or 265 mm. Other lengths are available on request.

Artikel	Typ	H	B	L	D	W
