

GV 30

Mesh cable tray universal connector

Mesh cable trays of the types G, GI and GTDW can be mounted quickly and easily in a straight orientation using GV 30 mesh cable tray connectors. However, GV 30 mesh cable tray connectors are also used for horizontal changes in direction of the aforementioned mesh cable tray. Assembly plates are also installed on mesh cable trays using a GV 30. This makes it very versatile. The GV 30 is a set of two GV-L 30 mesh cable tray connectors and a round-head bolt, hexagonal nut and washer. We provide components in various materials and surface finishes to ensure that the corrosion requirements are met for all sorts of applications.

Artikel	Typ	H	B	L	W
