

JAI-R
Elevator insulation

JAI-R elevator insulation is especially suitable for the acoustic decoupling of elevators that require a backpack suspension due to limited space. The sandwich construction, consisting of elastomer and steel plates, is based on the TÜV-certified standard type and is structurally designed for parallel guide rails. This type is also mainly fastened to anchor channel JTA W with the associated special bolts.

Artikel	Typ	H	B	L	W
JAI-R1-JB16 GV	JORDAHL Elevator Insulation R1, JB M16	324 mm	120 mm	280 mm	8.213 kg
JAI-R1-JC16 GV	JORDAHL Elevator Insulation R1, JC M16	324 mm	120 mm	280 mm	8.104 kg
