
JBA-NJ

Adjustable support corbel for reinforced concrete parapets

The support corbel JBA-NJ is made of high quality stainless steel Lean Duplex with corrosion resistance class III and is available in eight profile sizes (JBA-1 to JBA-8). Each profile size is available in three standard lengths (other lengths on request). If a JTA anchor channel with bolt is chosen as the fastening element, it is possible to compensate for tolerances at right angles to the support corbel. Tolerances in the axis of the support corbel are compensated via a toothed slot in which the JXS toothed locking plate is securely fastened. The corresponding installation set for the JBA-NJ includes the accessories required for installation.

TYP Type approval: S-WUE/220343
