

JFT+

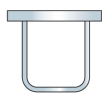

In conjunction with the JVAeco+ NFT / NAFT single brackets, JFT+ prefabricated element holders are used to suspend precast lintels. The prefabricated element holders are concreted into the precast lintels at the factory beforehand and are finally connected to the single bracket via an integrated K 28/15 or 38/17 short anchor channel piece (profile length 150 mm). The adjustment options parallel and perpendicular to the façade allow the lintels to be optimally aligned. The JFT+ prefabricated element holder is approved by the building authorities and, depending on the version, handles load levels 4.5, 7.0 and 10.5 kN.

Artikel	Typ	W
JFT1+	JORDAHL-Prefabricated part holder	0.247 kg
JFT2+	JORDAHL-Prefabricated part holder	0.393 kg
JFT3+	JORDAHL-Prefabricated part holder	0.417 kg
