

LGA 100

Cable ladder branch, height=100 mm

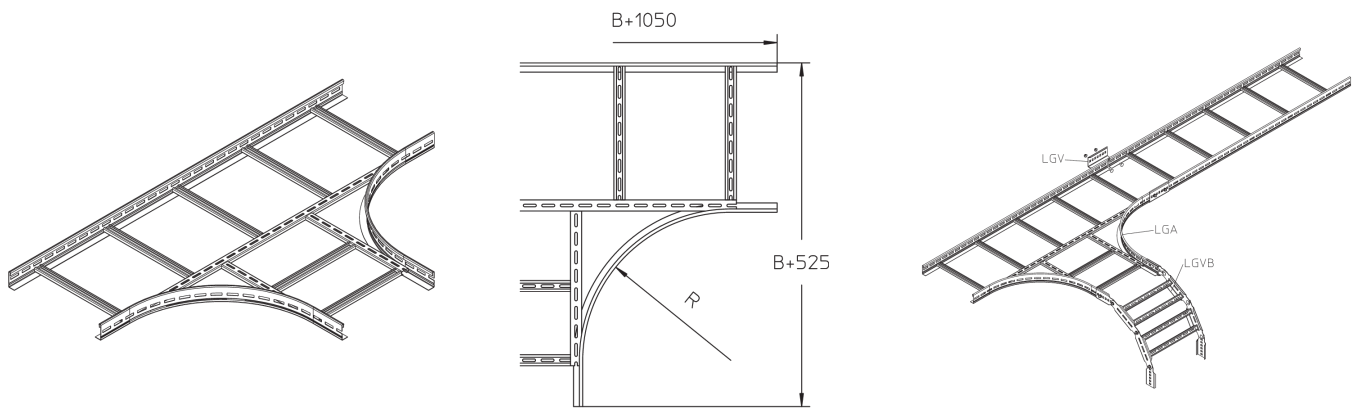

The LGA 100 T-shaped cable ladder branch allows the direction of the cable routing to be changed in the form of a branch. It is inserted between two cable ladders and enables another cable ladder to be connected at right angles. The cable ladder branch is suitable for cable ladders with rails 100 mm high and is 200 to 600 mm wide. We provide components in various materials and surface finishes to ensure that the corrosion requirements are met for all sorts of applications.
