

Linear Plastic Spacer

Spacer with upwardly protruding knobs

Linear Plastic Spacer linear surface spacers are used on horizontal reinforcement and are especially suitable for use in precast plants. The base strips are made of high-quality plastic and have upwardly protruding knobs which prevent the reinforcement from slipping. The spacers can be connected together and divided in a 500-mm grid. They are approx. 2000 mm long and required a concrete cover of 15 to 50 mm.
