

LKS

Button head screw

LKS are button head screws, which are part of the accessory range for underfloor systems. The bolts are used to securely connect various construction elements when installing screed-flush ducts. They have been given their name because of their half-round bolt head shape and are made of galvanised steel according to DIN EN ISO 4042. They are available in lengths from 5 to 12 mm.

Artikel	Typ	W
LKS M4X12	Pan head screw	0.001 kg
LKS M4X5	Phillips pan head screw,	0.001 kg
LKS M5X10	Pan head screw	0.005 kg
