

PENTAFLEX KB® 80

joint sheet for construction joints in walls/slabs

PENTAFLEX KB® 80 is a galvanised steel sheet with a special coating for sealing construction joints in walls/slab areas. It is attached to the wall reinforcement using one mounting stirrup per metre. The guide marking can be used to easily check the minimum embedment depth of 30 mm during casting. The individual elements are 2 m long and 80 mm high. They are covered on both sides by a split protective film that is only removed immediately before pouring the concrete. Construction joints sealed with PENTAFLEX KB® 80 withstand a water pressure of up to 5.0 bar.
