

PLURAFLEX® C11

Injection hose for low-viscosity injection materials

PLURAFLEX® C11 is a PVC-based single-walled injection hose used to seal construction joints. PU resins and PU foams can be used as injection media. The filling quantity per metre is 0.20 kg plus any additionally required injection material (1-3 kg). The maximum assembled length is 10 m as greater lengths would require an excessively high injection pressure. The system is easy to inject.
