

PLURAFLEX® P19

Injection hose for Portland cements, injection grouts, fine-grain cements and low-viscosity injection materials

PLURAFLEX® P19 is a PVC-based double-walled injection hose used to seal construction joints. PU resins or cement suspensions are suitable as injection media. The filling quantity per metre is 0.38 kg plus any additionally required injection material (1-3 kg). The maximum assembled length is 10 m as greater lengths would require an excessively high injection pressure. The system can be injected multiple times.
