

RDKL 110

Cable tray cover clamp

The cable tray cover clamps RDKL 110 are used to additionally secure the cable tray covers in the interior. They must be placed on top of the side of the cover and pressed on until they snap into place and interlock with the cable tray base. At least 6 safety elements must be used per 3 metres of cable tray cover according to the installation instructions. If the covers are to be used outdoors, use additional RD-SW storm protection brackets. The cable tray cover clamp RDKL 110 are 108 mm high corresponding to the tray and are made of stainless steel.
