

Ribbed Stainless Steel No. 1.4571 with Approval

Ribbed, CRC III

The approved stainless reinforcing steel (material no. 1.4571) is stainless steel rebar used in structures in reinforced concrete construction that are at risk of corrosion. The non-magnetic reinforcing bar made of B500B NR reinforcing steel has a straight shape with a typical ribbed structure. Reinforcing steel made from material 1.4571 is assigned to corrosion resistance class CRC III in accordance with ISO 3506:2020-04. The rebar is easy to weld and is resistant to intergranular corrosion even after welding. It is available with diameters of 6, 8, 10, 12 and 14 mm and in various shapes.
