

SWELLFLEX® BS

Bentonite waterstop tape

SWELLFLEX® BS swelling tape consists of talc-powdered sodium bentonite and butyl rubber. It is used to seal construction joints that are permanently or temporarily exposed to groundwater, water running through slopes and/or surface water. The clay-based expanding material creates a self-injecting effect when it comes into contact with water, making it ideal for in-situ concrete construction. Check the swelling tape for premature swelling before pouring the concrete.

Artikel	Typ	W
140100021827	Swell BS 16	0.600 kg
140100021828	Swell BS 18	0.900 kg

OPTIONALES ZUBEHÖR

SWELLFLEX® Mounting Channel, SWELLFLEX® Assembly Adhesive & Sealant

General building authority test certificate: P-1200/311/15 MPA BS
