

UEBSEA

Screed anchor

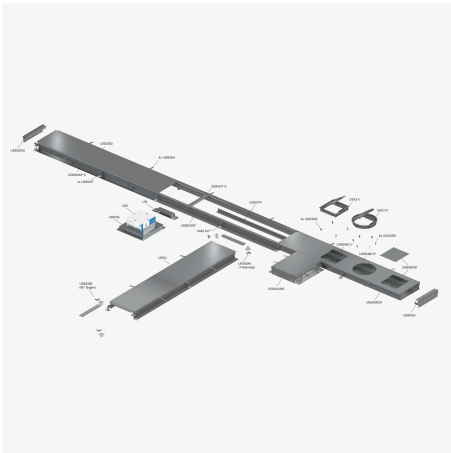

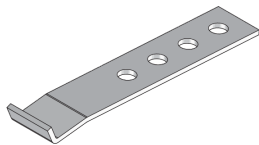

DIN

UEBSEA components are screed anchors which are snapped into the outer profiles of screed-flush cable systems. These articles are used to strengthen the bond between ducts and screed. This counteracts cracking later on. The anchors are made of sendzimir hot-dip galvanised sheet steel according to DIN EN 10346. Each duct unit includes four screed anchors 20 mm wide and 104 mm long.

Artikel	Typ	W
UEBSEA	screed anchor,	0.031 kg
