

WARMBORD® Type SE with Base

EPS formwork with thermal conductivity group 035

Our range of polystyrene elements includes the WARMBORD® Type SE with Base. This product consists of rigid expanded polystyrene foam (EPS). It has thermal conductivity group 035 and excellent plaster and concrete adhesion. It is a support-free, self-supporting insulation and slab edge formwork element. It is used for shuttering and insulating the sides of reinforced concrete slabs and eliminates the need for time-consuming bricklaying – no holding, stripping or cleaning necessary. The formwork is 180 to 250 mm high and has a standard length of 1000 mm. The WARMBORD® Type SE with Base is 95 mm wide.

Artikel	Typ	W
