

WARMBORD® Type SE without Base

EPS formwork with thermal conductivity group 035

Our range of polystyrene elements includes the WARMBORD® Type SE without Base. This product consists of rigid expanded polystyrene foam (EPS). It has thermal conductivity group 035 and excellent plaster and concrete adhesion. It is a support-free, self-supporting insulation and slab edge formwork element. It is used for shuttering and insulating the sides of reinforced concrete slabs and eliminates the need for time-consuming bricklaying – no holding, stripping or cleaning necessary. The shuttering in the version without a base is 180 to 250 mm high, comes in a standard length of 1000 mm and is 80 or 100 mm wide. Special dimensions are available on request.
