

WPDUK
Cover clamp

The cover clips WPDUK are used to secure wide-span covers on cable trays. The cover clips must be fixed 100 mm from the ends of the cover as well as in the middle of the cover. They can also be used as a storm protection bracket. At least 6 safety elements must be used per 3 metres of cable tray cover according to the installation instructions. In wind-exposed areas, the number of cover clips must be increased to at least 10. We provide components in various materials and surface finishes to ensure that various corrosion protection requirements for different areas of application are met.
