

AH-FT

Spacer made of plastic for use in precast slabs

Plastic spacers AH-FT are available in addition to the basic products for punching shear and shear force reinforcements. These accessories are used in conjunction with the JDA-FT-KL, especially in prefabrication plants. Installing them maintains the required spacing between the reinforcement layers. The spacers are made of plastic and are available in four different versions - for concrete covers of 15, 20, 25 and 30 mm. They offer optimum flexibility and take up minimal storage space.
