

## AMF 22

### Channel nut with spring

AMF 22 channel nuts with springs are threaded plates used with mounting channels A 41, KHA 41 and KHAL 41. The threaded hole is centred by turning the nut 90° after inserting or tipping in the nut. Channel nuts, also known as locking plates, are primarily used for spaced mounting in conjunction with long bolts or threaded rods. The spring holds the channel nut in place. AMF 22 are available with M6, M8, M10 and M12 threads. We provide components in various materials and surface finishes to ensure that various corrosion protection requirements for different areas of application are met.
