

BKDH

Floor duct cover lifter

The BKDH floor duct cover lifter can be used to undo the floor duct covers with attached BKDHK floor duct cover clamps. To do this, hook the cover lifters onto both sides of the cover directly next to the cover clamps and lift. Repeat this for all further positions until all cover clamps are disengaged from the floor duct and the cover can be lifted. The floor duct cover lifter is made of galvanised steel and is 400 mm long.

steel, galvanic zinc plated
