

Concrete Spacer Type KD

Spacer with fixing wire

KD-type concrete spacers are single spacers with a bone-shaped cross-section. They can be used with three different concrete covers and can be attached to horizontal and vertical reinforcements using the integrated wire. These spacers are made of high-quality fibre-reinforced concrete and have a small contact area, which is why they are used in exposed concrete applications. They are available for concrete cover depths from 20 to 60 mm.
