

# Concrete Spacer Type PRT

Cast concrete spacer with plastic clamp

PRT-type concrete spacers are spherical single spacers. They can be attached to horizontal and vertical reinforcement using the integrated double plastic clamps. This eliminates metal and wire parts from the concrete cover. These accessories are made of high-quality cast concrete. They are tested for frost and thaw resistance, water penetration depth, tilt stability and compressive strength in accordance with the DBV fact sheet Spacers. They are available for concrete cover depths of 15 to 40 mm.
