

ISOPRO® IPT Corner

ISOPRO® IPT Corner is a thermally insulated cantilever slab connection with an 80 mm insulating body and integrated suspension reinforcement on the balcony side for connecting cantilevered reinforced concrete components at external corners. It is suitable for transmitting negative moments and positive shear forces. The stainless steel rebar is resistant to corrosion. The pressure plane consists of steel compression rods. The partial elements left IPT EL and right IPT ER are also available separately. It complies with fire protection requirements: ISOPRO® IPT Corner is available for fire protection structures up to REI 90. Please specify the load-bearing capacity, concrete cover, element height and fire protection version when ordering.
