

ISOPRO® SQ

ISOPRO® SQ is a thermally insulated connection with an 80 mm or 120 mm insulating body for connecting supported steel structures with reinforced concrete components. It is suitable for transmitting positive shear forces and horizontal forces. The element consists of an EPS insulating body with extremely low thermal conductivity and a structurally effective framework made of stainless steel. The elements are installed in the shell over the course of the reinforcement and casting work. The steel structure is assembled by the steel constructors at a later date. Please specify the load-bearing capacity and element height when ordering.
