

JAI-A

Elevator insulation

The standard elevator insulation JAI-A consists of several layers of steel and elastomer plates and the associated hook-head t-bolts. It is usually attached to the JTA W anchor channel. Mounting is flexible either using a round hole connection or, in the adjustable version, via a slotted connection. The load-bearing capacity of JAI-A elevator insulation is determined in accordance with the TUV certification, taking into account the deformation criterion for guide rails according to EN 81-20.

Products	H	B	L	W
JAI-A1-JB16 GV	120 mm	95 mm	192 mm	3,671 kg
JAI-A1-JC16 GV	120 mm	92 mm	192 mm	3,569 kg
JAI-A1J-JB16 GV	120 mm	95 mm	192 mm	3,742 kg
JAI-A1J-JC16 GV	120 mm	92 mm	192 mm	3,640 kg

H: height
B: width
L: length
W: Weight per storage unit
