

JAI-R

Elevator insulation

JAI-R elevator insulation is especially suitable for the acoustic decoupling of elevators that require a backpack suspension due to limited space. The sandwich construction, consisting of elastomer and steel plates, is based on the TÜV-certified standard type and is structurally designed for parallel guide rails. This type is also mainly fastened to anchor channel JTA W with the associated special bolts.

steel, galvanic zinc plated

Products	W
JAI-R1-JB16 GV	8,213 kg
JAI-R1-JC16 GV	8,104 kg

W: Weight per storage unit

OPTIONAL ACCESSORIES

JTA W 40/22, JTA W 50/30
