

JGA+ Q

JGA+ Q scaffold anchors secure scaffolding on the finished structure without damaging the facing shell. They are attached to the load-bearing structure with dowels and guided through the facing shell in the T joint. Outdoor advertising or scaffolding needed later that is not stable when free-standing can be attached to the scaffold anchors. JGA+ Q is made of stainless steel 316 and has a load-bearing capacity NRd of 8.6. It is available in several lengths.

Products	H	B	L	weight
