

JMK+ F

The stainless steel Lean Duplex grout-in bracket JMK+ F is available with load levels of 3.5 and 7.0. The rated resistances are accordingly $FR_d = 4.7 \text{ kN}$ or $FR_d = 9.5 \text{ kN}$. The condition and load-bearing capacity of the substrate must be checked in advance. The compressive strength of the existing masonry must be at least 2.1 N/mm^2 and the wall thickness at least 240 mm. If the compressive strength is lower or walls are thinner, a special solution must be developed. The JMK+ F is available in cantilever lengths of 110 to 330 mm.

Products	L		W
JMK+250 F/7.0	250 mm	90 °	4,216 kg

L: length
