

JMK+ N

The stainless steel Lean Duplex grout-in bracket JMK+ N is available with load levels of 3.5 and 7.0. The rated resistances are accordingly $FRd = 4.7 \text{ kN}$ or $FRd = 9.5 \text{ kN}$. The condition and load-bearing capacity of the substrate must be checked in advance. The compressive strength of the existing masonry must be at least 2.1 N/mm^2 and the wall thickness at least 240 mm. If the compressive strength is lower or walls are thinner, a special solution must be developed. The JMK+ N is available in cantilever lengths of 110 to 330 mm.

Products	B	L		weight
JMK+250 N/7.0	60 mm	250 mm	90 °	3,335 kg
JMK+250 N/3.5	60 mm	250 mm	90 °	1,864 kg

B: width
L: length
