

## MKD

### Mounting clamp

The mounting clamp MKD with riveted pressure plate is used for clamp fastening to steel beams. The MKD-L accessory can be mounted on the mounting clamp itself. This can be used, for example, to attach small mesh cable trays and cable trays protruding out into the room. Furthermore, the W clamp or the HF-EL-clamp can be mounted directly on the MKD. The maximum load is between 1.3 and 1.5 kN. The clamping range extends from 6 to 40 mm. In conjunction with a grub screw that penetrates the coating, the mounting clamp can be included in the equipotential bonding. The article is also available with lock nuts. This prevents the clamp from unintentionally coming loose. Grub screw and lock nuts must be specified separately when ordering.
