

PENTAFLEX® Module

Water impermeable reinforcement connection

The PENTAFLEX® Module in combination with FERBOX® rebend connections is used wherever building components have to be joined together with a frictional and waterproof connection, especially in parts of buildings below ground level such as underground garages and basements. The PENTAFLEX® Module consists of the 60 mm high PENTAFLEX KB® joint sheet, a reinforcement box as an installation aid and foam filler strips for recesses. The module is available in lengths of 800 or 1200 mm. Other lengths are available on request.
