

PENTAFLEX® Module Corner

Water impermeable reinforcement connection (corner connection)

The PENTAFLEX® Module Corner for corner connections is used as a supplement to the PENTAFLEX® module. In combination with FERBOX® rebend connections, it is used wherever building components have to be joined together with a frictional and waterproof connection, especially in parts of buildings below ground level such as underground garages and basements. The PENTAFLEX® Module Corner consists of the 60 mm high PENTAFLEX KB® joint sheet, a reinforcement box as an installation aid and foam filler strips.
