

## RBV 110

Cable tray bend, variable, height = 110 mm

The variable cable tray bend RBV 110 allows the direction of cable routing to be changed horizontally by 0 to 90° and - mounted as a surface-mounted branch - a change in direction from 0° to 45°. They are suitable for cable trays R(G)(S) with sides 110 mm high and have integrated connectors and slots for fastening separating strips or brackets. The edges at the head of the variable cable tray bend are folded over to protect the cable. The variable cable tray bend is packed flat when delivered. To assemble the bend, fold up the inside and outside sections. Take care to align the head correctly. We provide components in various materials and surface finishes to ensure that the corrosion requirements are met for all sorts of applications.
