

SLP

The SLP slanted slit plate is used along with the bolt, nut and KS clamping washer to fasten the JVAeco+ brickwork support bracket to the anchor channel. When using a suitable dowel, the slanted slit plate SLP is used along with the KS clamping washer to attach it to the shell. The JVAeco+ can be adjusted vertically by ± 30 mm and perfectly aligned using the teeth in the bracket head and a slanted slit plate. The slanted slit plate can be used variably depending on the desired load level.
