

UEK3 BK

Brush cable outlet

UEK3 BK product solutions are brush cable outlets. These components from the underfloor system range are used as spare parts for plastic installation units. The outlets are used to route data and power cables safely through the open cable outlet. Their bristles provide additional protection against contamination by dust and dirt. The components are made of polyamide. They are available in black (similar to RAL 9011) under the article designation UEK3-BK-S.
