

WPREB

Wide-span cable tray end plate

The wide-span cable tray end plate WPREB is pushed onto the tray bottom at the end of a wide-span cable tray and bolted in place. It is used to protect the cables that are fed in or out. It is also suitable for use as an intermediate element when connecting two wide-span cable trays horizontally or vertically using side connectors. The wide-span cable tray end plate is from 195 to 595 mm wide corresponding to the cable tray. We provide components in various materials and surface finishes to ensure that various corrosion protection requirements for different areas of application are met.
